My Web Design Experience: Challenges and Successes

Introduction

While designing and developing my personal portfolio website, I faced several technical and design challenges. Throughout the project, I learned how to solve problems by testing different ideas, debugging my code, and improving the design step by step. This project also helped me become more confident working with HTML, CSS, and JavaScript.

Challenges I Faced

Responsive Layout
I used CSS Flexbox and Media Queries to adapt the layout to desktops, tablets, and mobile devices.

Background Image
I adjusted the background image properties to display correctly across different screen sizes.

Project Section Design
I redesigned the Projects section several times by improving image size, spacing, and content alignment.

Interactive Project Request Form
I built an interactive form using JavaScript with validation, a success message, and automatic form reset.

Dark Mode
I implemented a light/dark theme toggle using JavaScript and CSS classes.

File Organization
I reorganized the project into dedicated folders for HTML, CSS, JavaScript, images, and assets.

Debugging
I tested and fixed HTML, CSS, and JavaScript issues using browser developer tools and repeated testing.

What I Did Well

• Created a modern portfolio layout.
• Built a responsive design using Flexbox and Media Queries.
• Added JavaScript interactivity including form validation, dynamic success messages, automatic form reset, and Dark Mode.
• Maintained a consistent color theme.
• Built a responsive project showcase section.
• Organized HTML, CSS, and JavaScript into separate files.
• Continuously refined the design based on testing.

Conclusion

This project strengthened my HTML, CSS, and JavaScript skills while improving my understanding of responsive web design, DOM manipulation, form validation, debugging, and project organization. It also gave me practical experience building a complete personal portfolio website.
